#### TIMELINE

[daniel\\_v](#) submitted a report to [TomTom](#).

Apr 17th (about 1 month ago)

Dear Security team,

I found a git repository on <http://betaforum.tomtom.com/.git>. This endpoint allows an attacker to retrieve much of the source code and git history for this service which could potentially reveal sensitive information, it all depends what is stored there.

#### Example:

1. <http://betaforum.tomtom.com/.git/logs/HEAD>
2. <http://betaforum.tomtom.com/.git/config>

#### Mitigation

The restrict access (403 forbidden) are enabled only on /.git and not their subfolders. You just need to add all the git subfolders to the same rule.

Best Regards,  
Daniel

#### Impact

An attacker can get information just dumping data using .git repository.

[bassguitar](#) HackerOne staff changed the status to Triaged.

Hello [@daniel\\_v](#),

Thank you for your submission! We were able to validate your report, and have submitted it to the appropriate remediation team for review. They will let us know the final ruling on this report, and when/if a fix will be implemented. Please note that the status and severity are subject to change.

Regards,  
[@bassguitar](#)

[kraaltomtom](#) closed the report and changed the status to Resolved.

Updated Apr 18th (about 1 month ago)

Fixed! Thanks for reporting!

[daniel\\_v](#) requested to disclose this report.

Apr 27th (about 1 month ago)

Dear security team,

Can we disclosure this one?
